PROFESSIONAL SUMMARY

Results-driven Full-Stack Software Engineer with 2+ years of experience architecting and delivering enterprise ERP, CRM, and internal business applications end-to-end — from requirements gathering through production support. Proven track record building multi-module systems (order management, inventory, billing, and workforce tracking) using Angular, Node.js, Express.js, PHP, and MySQL, backed by strong RESTful API design and Postman-driven documentation. Strong analytical background in Power BI and SQL, having reduced manual reporting effort by ~70% through automated data pipelines. Seeking a Full-Stack or Software Engineer role in a product-driven company to build scalable systems and deliver measurable business impact.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, PHP, C#

Frontend: Angular, HTML5, CSS3, Bootstrap, Responsive/Mobile-First Design

Backend: Node.js, Express.js, PHP, TypeORM, Django, ASP.NET Core (Basic)

Databases & Realtime: MySQL, SQL, phpMyAdmin, Redis, Socket.io

APIs & Tools: RESTful APIs, Postman, Git, GitHub, Capacitor (Android packaging), PHPMailer

Data & BI: Power BI, Data Analysis, Data Visualization, Excel

Cloud & ML: AWS (Basic), Scikit-learn, Machine Learning

Methodologies: Agile, End-to-End Delivery, Production Support, Debugging, CI/CD (GitHub Actions), Automated Testing (Jest, Cypress)

PROFESSIONAL EXPERIENCE

Software Engineer | Sedna Technologies

July 2025 – Present

Kalyan, Maharashtra

- **Order Management ERP** — Architected and delivered an end-to-end Order Management system covering customer enquiries, quotations with automated discount/tax calculations, order tracking with delivery scheduling, invoicing, and complaint/after-sales handling, using Angular, Node.js, Express.js, and MySQL; processed 1,500+ orders in production with full audit logging.
- **Inventory Management ERP** — Built a real-time inventory system tracking 500+ SKUs through their complete lifecycle (stock movement, purchase orders, and returns), with automated low-stock email alerts, product movement history, and paginated, index-optimized queries for performance at scale — achieving zero data inconsistency.
- **Billing ERP (PHP)** — Launched a billing system in PHP, MySQL, and PHPMailer covering quotation-to-tax-invoice generation, proforma invoices, packing lists, and automated document exports (Word/Excel/PDF) for financial reporting — handling 100+ active billing records monthly.
- **Employee Management System** — Engineered a workforce management platform for 20+ field and office staff featuring GPS-based attendance check-in, live employee location tracking, project-wise work-update logging, and an expense-tracking approval workflow, packaged additionally as a native Android app — reducing HR coordination time by 30%.
- **CRM Management System** — Maintained and upgraded a multi-site CRM (lead/inquiry management, site visits, space allocation, and invoicing) by resolving critical bugs, shipping feature updates, and providing direct user issue resolution — improving platform uptime and client satisfaction.
- **API Architecture** — Designed, documented, and maintained 60+ RESTful API endpoints (GET, POST, PUT, DELETE) with organized Postman collections, enabling clean frontend-to-MySQL integration across 5+ enterprise applications.

Data Analyst | ACS Consultancy

April 2024 – April 2025

Remote (Part-time)

- Built automated Power BI KPI dashboards tracking Revenue, Growth Rate, Profit Margin, and Top Products — providing executives with real-time multi-dimensional drill-through analysis by region, time, and sales rep.
- Automated data refresh pipelines using SQL and Power Query, cutting manual reporting effort by ~70% and reducing weekly report generation from 8 hours to under 2 hours.
- Cleaned and normalized 50,000+ monthly sales records using SQL and Excel, resolving data inconsistencies and improving reporting accuracy to 98%+.
- Presented data storytelling insights to senior leadership, identifying 3 underperforming sales zones that led to targeted campaign adjustments and a 12% regional revenue improvement.

Remote

- Built a Book Recommendation System using Python and Scikit-learn, applying collaborative filtering, content-based filtering, and EDA to a dataset of 270,000+ books.
- Executed an end-to-end ML pipeline — data preprocessing, feature engineering, model training, evaluation, and accuracy benchmarking — achieving an 87% recommendation relevance score.
- Documented findings and model performance metrics, presenting results to the senior data science team for review and feedback.

KEY PROJECTS

Hospital Management System — Angular · Node.js · TypeScript · TypeORM · MySQL · Redis · Socket.io

- Architected a multi-tenant Hospital Management System covering the full patient journey — registration, appointment booking, doctor scheduling, OPD encounters, lab orders/results, prescriptions, pharmacy inventory, and billing — plus a dedicated patient self-service portal.
- Implemented JWT authentication, role-based access control, audit logging, and Redis caching on the backend; built automated test coverage with Jest and Cypress and a CI pipeline via GitHub Actions.

Coworking Space Management System — Angular · Node.js · Express.js · MySQL · RESTful APIs

- Built a full-stack platform for managing coworking space operations — seat/cabin/meeting-room booking, membership plans, real-time availability, and automated invoicing — using Angular, Node.js, Express.js, and MySQL.
- Designed a dynamic booking engine handling hourly, daily, and monthly plans with conflict-free slot allocation, plus an admin dashboard for occupancy tracking, member management, and revenue reporting.
- Integrated automated payment and billing workflows with receipt generation, reducing manual front-desk coordination and improving space-utilization visibility for facility managers.

Happiness Index System for Students — Python · Django · HTML · CSS · RESTful APIs

- Architected a full-stack Django web app to calculate and track student happiness indexes across 4 key dimensions: health, education, psychological well-being, and governance.
- Created a custom scoring algorithm analyzing 12+ input factors; delivered personalized actionable suggestions per student, improving engagement tracking for 200+ students.
- Built RESTful APIs for data submission and retrieval; deployed with a clean, mobile-responsive HTML/CSS frontend.

LPG Gas Leakage Detection System — Python · Arduino · IoT · MQ6 Sensor · Solenoid Valve

- Prototyped an IoT safety device using Arduino UNO and an MQ6 gas sensor that triggers automatic solenoid-valve shutoff and a buzzer alert within 2 seconds of gas detection.
- Coded real-time sensor logic in Python/C++ and integrated hardware components (SMPS, LED, buzzer); validated the device for household and LPG-pump deployment.

EDUCATION

B.Tech in Computer Science & Engineering

July 2023

Walchand Institute of Technology, Solapur

CGPA: 8.26 / 10.0

CERTIFICATIONS & ACHIEVEMENTS

- Data Science Certification — ExcelR (2024)
- Data Science Internship Certificate — AiVariant (2024)
- Participant, Regional Level Project Competition — AISSMS College of Engineering (2023)
